Setting Up Kioptrix Machine Environment

1. Download the rar file from "https://www.vulnhub.com/entry/kioptrix-level-1-1,22/"

2. Extract the file
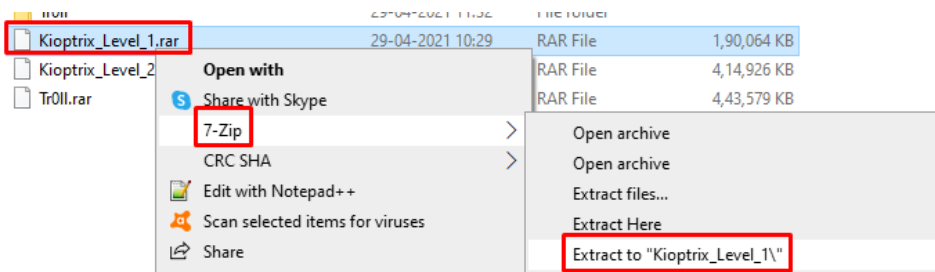

3. Open the .vmx file using vmaware

4. Set the Network Adapter to "NAT"

5. To get the IP address of the victim machine you need to type
   "sudo netdiscover -i eth0"

   Where "-i" is for network interface and because we are using NAT on both
   (victim and attacker) machine we are on "eth0" interface

   After executing this command it will take few minutes to discover the IP
   address.

   *Note :- Ignore 192.x.x.1,192.x.x.2,192.x.x.254 IP and your victim machine's
   IP will be ner by your IP address*

```
